

CONNECTING EUROPE FACILITY - Telecom Grants 2014-2020

eProcurement

The CEF eProcurement Digital Service Infrastructure (DSI) serves to support Member States to implement electronic procurement, by simplifying public procurement procedures and fostering cross-border interoperability in line with the new EU directives (Directives 2014/24/EU, 2014/25/EU and 2014/23/EU).

The actions funded further to the 2015-2020 eProcurement calls include the implementation of a "customised" European Single Procurement Document (ESPD) into existing software solutions to facilitate the SMEs' participation in public procurement procedures and the connection to the eCertis mapping tool of certifications and attestations; the implementation of the eTendering interface, to enable private companies and contracting authorities to make their eProcurement systems interoperable; the implementation of contract registers to provide more structured information about procurement procedures to achieve more transparency; the implementation of solutions interconnecting national notice publication portals and TED to make it easier for companies, in particular SMEs, to find potential business opportunities abroad; and the implementation of eForms used by public buyers to publish notices on Tenders Electronic Daily (TED) in line with the provisions of the eForms Implementing Regulation and its Annex.

The Actions supported have a common goal of enabling interoperability, which will contribute to reducing bureaucracy, improving efficiency and increasing transparency in public procurement. Moreover, they are intended to ultimately contribute to the achievement of the Once-Only Principle and of the Digital Single Market (DSM).

34 agreements have been signed for eProcurement DSI under the annual calls¹ from 2015 - 2020. A total of approximately **€13 million** of CEF Telecom funding has been earmarked for 17 Member States, 2 EEA Country and one third Country, corresponding to a total cost of €17 million.
